Netting and Rigging Specifications

A professional golf facility needs high quality barrier netting. At Gabba Sporting Products we offer the supply, delivery and installation of purpose-built perimeter and barrier netting to reduce ball loss, risk of injury, and property damage.

The netting we recommend is purpose built and made of a professional grade high density polyethylene making it ideal for use in permanent, large-scale outdoor installations:

- Resistant to UV degradation (sunlight).
- Excellent strength both in the wet and dry.
- Very low water absorption (less than 1%).
- Very little elongated creep causing 'drooping' or 'bagging' of the net.

All guy ropes are correctly positioned to maximise strength and rigidity according to engineers and trajectory study specifications.

Product	Material	Ply	Dimensions	Colour
Golf barrier netting	Knotted High Density Polyethylene	18	20mm square mesh	Black

Golf Ball Trajectory

In order for safety netting to be adequately effective golf ball trajectory must also be considered. Trajectory is determined by a number of external factors, including the type of iron, force, altitude and weather conditions. Clubface direction and swing path can similarly affect results. The average trajectory height can range anywhere between 26 and 32 metres. It is important to consider trajectory when installing barrier netting so that your patrons and facilities are satisfactorily protected.
